

Risk elements: Options associated with **moderate** complexity

Option 1	Option 2	Option 3	Option 4
Refusal of debridement	Shared Decision Making to pursue or not pursue a minor surgery	New prescription recommendation (i.e., oral or topical prescription item)	New moderate risk treatment recommendation (i.e., Multilayer compression)

Risk elements: Options associated with **high** complexity

Option 1	Option 2	Option 3	Option 4
New IV medication recommendation	Acute limb ischemia/gangrene and urgent care needs or decisions	Situations that involve discussions of escalation of care (i.e. hospitalization) or deescalation of care	Change in condition associated with grave prognosis/end of life (i.e. skin failure, Kennedy ulcers)

Note – not all of these RISK elements are easily captured in billing logic, so please ensure the documentation reflects the pertinent items to show the degree of complexity.
